Os lab Assignment 1

FAQ's.

Q1) Why was the specific domain selected?

→ A domain is a logical grouping of computers. The computers in a domain can share physical proximity on a small LAN or they can be located in different parts of the world. As long as they communicate, physical location is irrelevant.

Domain/OS provides new administrative commands and more complex permissions systems ~~check~~ which can be configured to behave properly under any of the 3 environments. It provides an improved version of the X window system, complete with VUE CHP's predecessor to (DE) but performance tends to be poor.

Q2] List few more domains of application

→ Data centre operations

Application Security

Virtualization

Security as a service

Encryption and key management.
